

# Data-driven partnerships for powerful research

The Q-Centrix Research Network helps more organizations achieve successful, high-margin research by facilitating connections to the right opportunities, data, and services.

As a trusted partner to **more than 1,200 hospitals** across the U.S., we offer the resources to provide hospitals with new funding sources and help life science companies access a wealth of high-quality clinical data to drive innovation.

## Participation in the Q-Centrix Research Network provides:

- Access to industry-sponsored prospective clinical trials matched to their needs along with funded services for patient screening.
- Funded opportunities to contribute data for specific retrospective studies, with the data curation and preparation managed by Q-Centrix.
- Access to tools to help support the feasibility of projects and to identify relevant patients in real-time.
- Access to de-identified registry data from other hospitals, structured consistently for use by hospital staff to conduct non-funded research.

### Helping hospitals...

- Secure new funding sources.
- Gain more value from their clinical data.
- Participate in a broader research community.

### Helping life science companies...

- Understand outcomes in real world populations that are difficult to source from a single hospital.
- Access a wide range of clinical data to drive innovation.

Q-Centrix is in the unique position to use our valuable clinical data management solutions to help further unlock the value of unstructured clinical data to support research initiatives.

With a decade of experience supporting a range of research and development needs and a nuanced understanding of data requirements, Q-Centrix is a natural fit to support research needs for our hospital and life science partners.
